DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 8-12, 16-18 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Stopczynski et al. '996.

The patent to Stopczynski et al. discloses a vehicle crash safety system that is dynamically self tuning as adjusts the ride height of the host vehicle by monitoring the target vehicle with radar 62 and transponder 60 that interrogates the target vehicle to obtain bumper height as shown in Figure 6. The height of the bumper is adjusted as described in column 8, lines 25-45.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stopczynski et al. in view of Brookes et al. "155.

The patent to Stopczynski et al., as described above discloses all features of the claimed invention but for an electronically controlled air valve for the suspension height

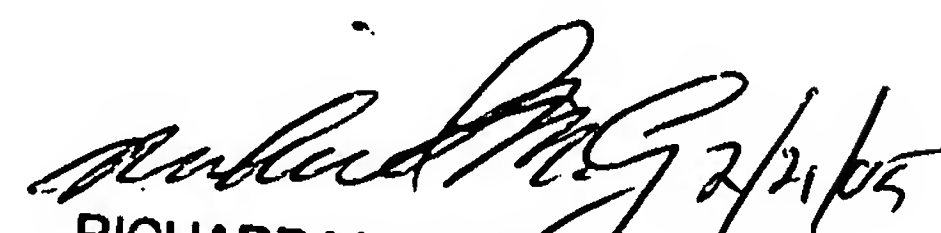

adjustment. The patent to Brookes et al. discloses an electronically controlled air valve 23 that adjusts suspension height. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the system of Stopczynski et al with an electronically controlled air valve, as disclosed by Brookes et al., in order to adjust the height of the vehicle in a timely manner when a collision is eminent.

Claim 2, 4-7 and 13-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
